

RealiteQ 4.0 - your bridge to Industry 4.0

Industry 4.0 is not a revolution, actually, it is a natural evolution of Industry 3.0. The first two phases – computerization and connectivity – are still industry 3.0 but they are essential phases to get started on the Industry 4.0 pathway. The visibility and transparency phases are the entrance to Industry 4.0, making knowledge from raw data and presenting it on a friendly Dashboard, alerts on critical events and providing beneficial insights to the operator. RealiteQ 4.0 is exactly there to lead you from the Connectivity stage and forward all the way to Industry 4.0

The major barriers for adopting Industry 4.0 technologies, are: Costs, Technology complexity & Security risks

With RealiteQ 4.0 the barriers are disappearing, and the benefits remain

- **Cost** - RealiteQ 4.0 installation and maintenance costs are low and fit any size of factory (try us)
- **Technological complexity** - RealiteQ 4.0 is simple to install, easy to use and does not require maintenance
- **Security Risks** - RealiteQ 4.0 is a most secure system. If required, RealiteQ 4.0 can be installed on a local server. On requests, it can easily be upgraded to the cloud in a low cost. It is also 100% modular so it is possible to start by connecting only the peripheral systems and later on to connect also the production lines.

RealiteQ 4.0 Single source solution

IT/OT convergence - RealiteQ 4.0 integrates information technology (IT) with operational technology (OT) used to monitor events, processes and devices, makes adjustments in networks sites, machines, enterprise and industrial operations and offers significant benefits in cost, quality, speed and reliability.

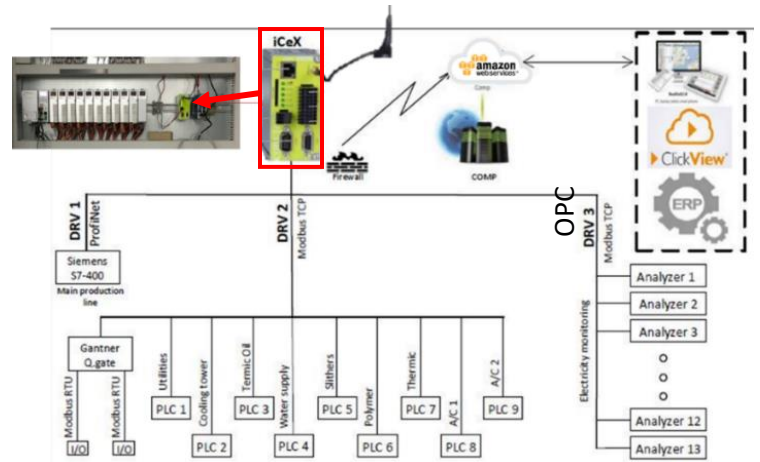

Data management - RealiteQ 4.0 is much more than just a remote-control system, it is a real-time data management system from A to Z, from the data acquisition to Big data analytics. By using RealiteQ 4.0 you are not only operating and controlling the system in real-time, but you also can use the data in order to increase the efficiency.

RealiteQ 4.0 – Single source comprehensive smart & simple system

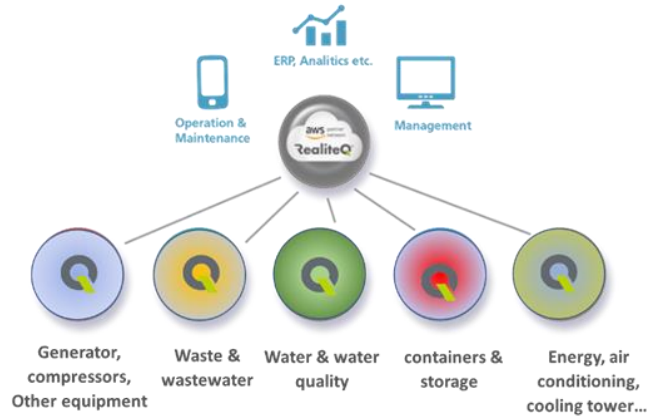

RealiteQ 4.0 - your solution for managing plant floor

RealiteQ 4.0 via its iCeX end unit a Data Producer that explores sensors, analyzers, controllers etc. over I/O, Ethernet or Serial protocols, and link them to the internet by any wire, cellular, satellite or other connection. Support most of the main industrial protocols and can be connected to different devices using up to 3 different protocols in parallel what makes the system very cost effective, simple to install with actually no maintenance.

RealiteQ 4.0 connect it all - everything you can think of... and more

Controlling the production floor is important, but what with all the rest? Controlling all the Peripheral equipment reduce operation risks & increase efficiency & Safety!

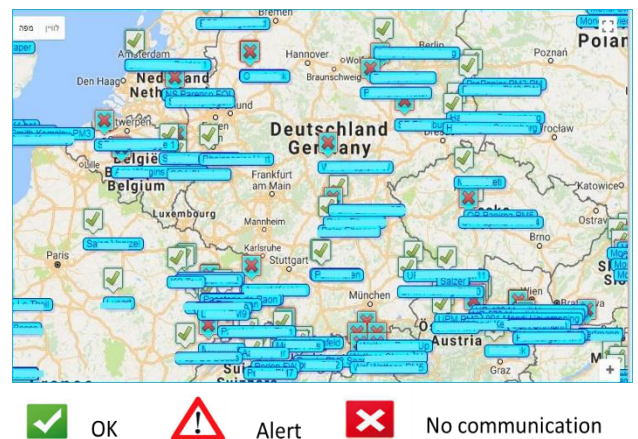

RealiteQ 4.0 – for your plant safety & efficiency

RealiteQ 4.0 - your solution for managing corporate facilities

RealiteQ 4.0 can connect any facility anywhere to one central system makes real time information available also to the corporate headquarter.

RealiteQ 4.0 Geo-map and Assets Health – allow authorized managers to have a Real-time view of all the facilities status (Assets Health), machines or devices in one shot on a map (can present also actual values).

RealiteQ 4.0 – your eyes from anywhere, anytime
